

BIO 461: Stream Ecology & Appalachian Angling -3 credits

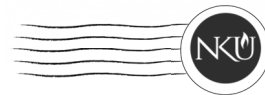

Join Dr. Richard Durtsche in the Smoky Mountains for an overview of stream ecology and an introduction to the biology of fly fishing. Study ecological concepts of aquatic systems; field methods for the collection and identification of aquatic insects; techniques of fly casting, fly tying, and fishing artificial flies; and an understanding of Kentucky and Appalachia stream fish, their behavior, and conservation.

This course can be taken to fulfill the EEO upper division elective for Biology Majors.

MAY 28 - JUNE 1, 2019

Application Deadline: April 26, 2019
